

VACON NXP AND NXc  
THE SUPERLATIVE IN PERFORMANCE

**vacon**  
DRIVEN BY DRIVES

## THE DYNAMIC CHOICE

The Vacon NXP is a state-of-art AC drive for use in all applications where robustness, dynamic performance, precision and power are required.

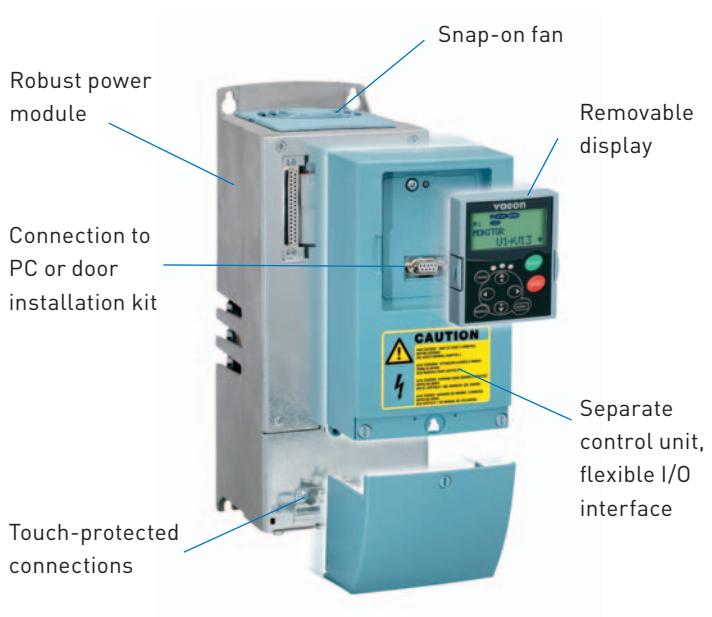

The quality and reliability of a machine or a process is in most cases the result of a precise and dynamic control of AC motors. The Vacon NXP has been designed to provide the best possible control under all circumstances and thus to ensure a high operational quality and availability for the entire lifetime of the system.

A forerunner in designing and manufacturing AC drives, Vacon has developed innovative solutions and leading-edge technology for demanding applications and high powers.

By bringing these solutions to the customer the Vacon NXP offers new opportunities and helps to create the best and most innovative products and to reach the most challenging targets.

### Features

- Complete power and voltage range
- Wide set of applications adapts the Vacon NXP to virtually any need
- Controls induction and permanent magnet motors
- Dynamic open and closed loop vector control
- Complete range of communications and I/O options
- Fast drive to drive communication

### FR4—FR9

## TOP-CLASS FLEXIBILITY

The Vacon NXP offers, in addition to its control characteristics, a wide choice of products and cabinets for the varying needs in the high-power range.

There are three models available to meet various customer needs as follows:

- Vacon NXP IP21/IP54 wall-mounted or stand-alone drives for installation wherever there is space available
- Vacon NXP high-power IP00 drive modules for installation into the customer's cabinet
- Vacon NXC robust cabinet drive with top flexibility and a wide range of options

## STAND-ALONE VACON NXP

High-power Vacon NXP drives are also available in a compact stand-alone IP21 or IP54 enclosure. These units are designed for use in applications where the drive has to be compact and easy to install.

The Vacon NXP stand-alone drives are fully enclosed at the factory and are ready for installation immediately. The drive has integrated fuses as standard and no extra protections are required by the drive. It is also possible to equip the drive with an optional integrated load switch which further simplifies the handling in the field.

### Mains voltage 380—500 V, 50/60 Hz, 3~

EMC filtering T	Optional
Integrated brake chopper (cabling top entry)	Optional (H: +122 mm)

## IPOO VACON NXP MODULES

The Vacon NXP high-power IP00 drive modules are intended for installation into a separate enclosure. Thanks to the robust and square-shaped design of the module, the enclosure design is easy and straightforward.

### Mains voltage 380—500 V, 50/60 Hz, 3~

## VACON NXC, COMPACT AND FLEXIBLE

The Vacon NXC cabinet drive is compact and well tested, fully utilizing the flexibility of the Vacon NXP drive. The Vacon NXC is designed to meet the most demanding requirements on flexibility, robustness, compactness and service-friendliness. It is a safe choice for any application.

### Easy ordering

The Vacon NXC incorporates the frequency converter and optional items such as mains switch, contactor, control options as well as output filtering in one compact unit which is easy to install and service. Ordering is made easy by integrating the Vacon NXC enclosure options into the typecode to which they are appended with "+" codes.

### User-friendly

In the NXC, the control unit is mounted in a separate compartment at an easily accessible height together with all control options. Ample space around the power terminals allows easy installation and connection of power cables. Bottom plates and earthing clamps for 360-degree earthing of motor cable shields are provided as standard.

### Well tested

All NXC drives are designed with more than 20 years of experience in enclosure design. It is a well tested and proven solution. The good thermal handling of the enclosure guarantees a long lifetime for the frequency converter and trouble-free operation also in most demanding environments. Approved EMC solutions ensure reliable operation of the converter without disturbing other electrical equipment.

### Service-friendly

The NXC enclosures are designed to fully utilize the new and innovative installation features of the high-power Vacon NXP frequency converters. The NXP power units are mounted on rails which are extendable with a pull-out jig. The jig can be used for pulling the power unit out of the enclosure for service.

# VACON NXP/NXC TYPE DESIGNATION CODE

**NXC 0520 5 A 2 L 0 SSF A1A200000 + IFD**

- NXC "+" options, see table below
- Option PCBs; each slot is represented by two characters where:  
 Ax = basic I/O PCBs, Bx = expander I/O PCBs  
 Cx = fieldbus PCBs, Dx = special PCBs
- Control
  - S = standard FR4-FR8 V = as S, but varnished PCBs
  - F = standard FR9 and NXC G = as F, but varnished PCBs
  - A = standard NXP FR10-FR12 B = as A, but varnished PCBs
- Cooling
  - S = standard air-cooled, T = through-hole mounting FR4-FR9
- Supply
  - S = 6-pulse, T = 12-pulse, O = 6-pulse + load switch (stand-alone)
- Brake chopper
  - 0 = no brake chopper
  - 1 = integrated brake chopper
- EMC emission level EN61800-3
  - C = 1st env., unrestr'd distr. T = for IT networks
  - H = 1st env., restr'd distr. N = enclosure required (FR10-FR14)
  - L = 2nd environment
- Enclosure class
  - 0 = IP00 (module only)
  - 2 = IP21 (Nema 1)
  - 5 = IP54 (Nema 12)
- Control keypad
  - A = standard alphanumeric
  - B = no local keypad
  - F = dummy keypad
  - G = graphic display
- Nominal mains voltage
  - 5 = 380-500 VAC, 6 = 525-690 VAC, 2 = 208-240 VAC
- Nominal current voltage

- Product range
  - NXP = wall-mounted / stand-alone / module
  - NXC = cabinet

## VACON NXC OPTIONS

### Control terminal options (T group)

+TIO	Basic I/O wired to external terminals
+TID	Basic I/O wired to external terminals + additional terminals
+TUP	Terminals for 230 VAC control voltage

### Input device options (I group)

+ILS	Load switch
+IFD	Switch fuse and fuses
+ICB	Circuit breaker (MCCB)
+ICO	Input contactor
+IFU	Input fuses

### Main circuit options (M group)

+MDC	Terminals in cabinet for DC / brake chopper
------	---

### Output filter options (O group)

+OCM	Common mode filters
+ODU	du/dt filter
+OSI	Sine wave filter

### Protection devices (P group)

+PTR	External thermistor relay
+PES	Emergency stop (cat 0)
+PED	Emergency stop (cat 1)
+PAP	Arc protection
+PIF	Insulation fault sensor

### General options (G group)

+G40	400 mm empty cabinet
+G60	600 mm empty cabinet
+G80	800 mm empty cabinet
+GPL	100 mm base

### Cabling options (C group)

+CIT	Input (mains) cabling from top
+COT	Output (motor) cabling from top

### Auxiliary equipment (A group)

+AMF	Motor fan control
+AMF	Motor heater feeder
+AMB	Mechanical brake control
+AMO	Motor operator for +ICB
+ACH	Cabinet heater
+ACL	Cabinet light
+ACR	Control relay
+AAI	Analog signal isolator
+AAA	Auxiliary contact (control voltage devices)
+AAC	Auxiliary contact (input device)
+AT1	Auxiliary voltage transformer 200 VA
+AT2	Auxiliary voltage transformer 750 VA
+AT3	Auxiliary voltage transformer 2500 VA
+AT4	Auxiliary voltage transformer 4000 VA
+ADC	Power supply 24 VDC 10 A
+ADS	230 VAC customer socket

### Door-mounted options (D group)

+DLV	Pilot light (Control voltage on)
+DLD	Pilot light (D01)
+DLF	Pilot light (FLT)
+DLR	Pilot light (RUN)
+DCO	Main contactor operation switch
+DRO	Local / Remote operation switch
+DEP	Emergency stop push-button
+DRP	Reset push-button
+DAM	Analog meter (A01)
+DAR	Potentiometer for reference
+DCM	Analog meter + current trafo
+DVM	Analog voltage meter with selection switch

**OPT-A1**

Terminal	Defaults settings	Programmable
1	+10V	Reference voltage
2	AI1+	Frequency reference 0-10 V
3	AI1-	AI common (GND)
4	AI2+	-10-+10 V, 0/4-20 mA
5	AI2-	Differential
6	+24V	AI common (differential)
7	GND	0-20mA, 0/-10 V-10 V
8	DIN1	GND
9	DIN2	Start forward
10	DIN3	Start reverse
11	CMA	External fault input
12	+24V	Common for DIN1 - DIN3 (GND)
13	GND	Floating
14	DIN4	Control supply (bidirectional)
15	DIN5	I/O Ground
16	DIN6	Many possibilities
17	CMB	Multi-step speed select 1
18	A01+	Multi-step speed select 2
19	A01-	Fault reset
20	D01	CMB
		Common for DIN4 - DIN6 (GND)
		mA
		A0 common (GND)
		READY, I ≤ 50 mA, U ≤ 48 VDC

Default settings of OPT-A1, OPT-A2 and OPT-A3 for the Basic and Standard Applications.

28	TI1+	Thermistor
29	TI1-	Warning, no response

# FIRST-CLASS USABILITY

The text display with functions such as multi-monitoring, parameter copy, parameter backup and start-up wizard makes commissioning as easy as possible.

The Vacon PC tools are available for downloading from the Vacon website at <http://www.vacon.com>. These include:

- Vacon NCDrive for parameter setting, copying, storing, printing, monitoring and controlling
- Vacon NCLoad for software updating and uploading special software to the drive
- Vacon NC1131-3 Engineering is available for making tailor-made software. A license key and training required.

Two external control places

The NCDrive communicates with the drive via the following interfaces:

- RS-232
- Ethernet TCP/IP
- CAN (fast multiple drive monitoring)
- CAN@Net (remote monitoring)

The All-in-One application package has seven applications (=default settings and functionality of control inputs and outputs, see tables below) which can be selected with one parameter. The application will also be requested by the Start-up Wizard at the first power-up. With this single setting, the controls can be programmed e.g. for two external control places or a pressure control with the integrated PID controller. In most cases, the default basic application is suitable and only the min/max frequencies as well as motor nominal values must be set.

Thanks to the modular software applications made by the Vacon NC1131-3 Engineering tool, the All-in-One application package can be replaced by the NXP Application Package that turns the Vacon NXP into a full-featured high-performance drive. There are also several other general-purpose software applications available.

DI3	Fault reset	P
DI4	Jog speed sel	P
DI5	External fault	P
DI6	Acc/dec time sel	P
AO1	fout	P
DO1	Ready	P
RO1	Run	P
RO2	Fault	P

Most flexible of all

#### Pump and Fan Control

I/O	Defaults	
AI1	PID reference	P
AI2	PID actual value	P
DI1	PID start/stop	P
DI2	Interlock 1	P
DI3	Interlock 2	P
DI4	f ctrl start/stop	P
DI5	Jog speed select	P
DI6	PID/f ctrl select	P
AO1	fout	P
DO1	Fault	P
RO1	Autochange 1	P
RO2	Autochange 2	P

Control of up to five pumps with auto-change

## NXP APPLICATION PACKAGE

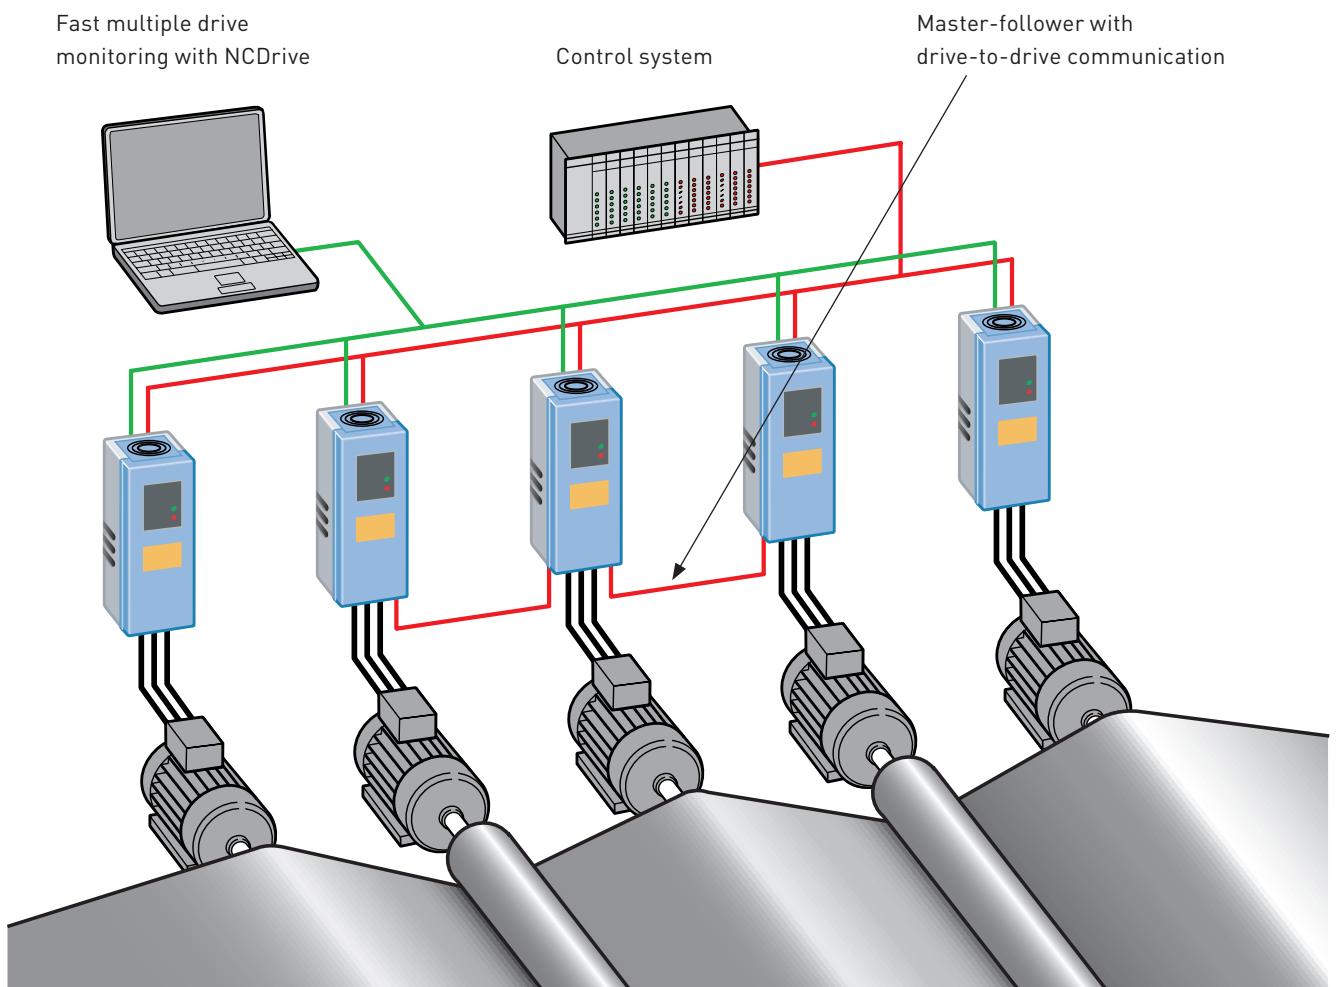

An alternative to the default All-in-One application package, the Vacon NXP can also be equipped with the NXP Application Package. It is designed to meet the requirements in demanding automation applications.

### SYSTEM INTERFACE APPLICATION

The System Interface Application is designed to provide a logical and flexible interface to machine controllers for use in demanding applications requiring co-ordinated drives. Typical applications can be found in drive systems for paper machines, drives on metal industry and processing lines. It is also suitable for any general application.

#### Features

- Flexible fieldbus process data connections
- Flexible speed and torque reference chains
- Adaptive speed controller
- Inertia compensation and oscillation damping features
- Fast drive-to-drive communication for master-follower applications
- Supports permanent magnet motors
- Integrated mechanical brake and motor fan control
- Emergency stop with separate ramp time

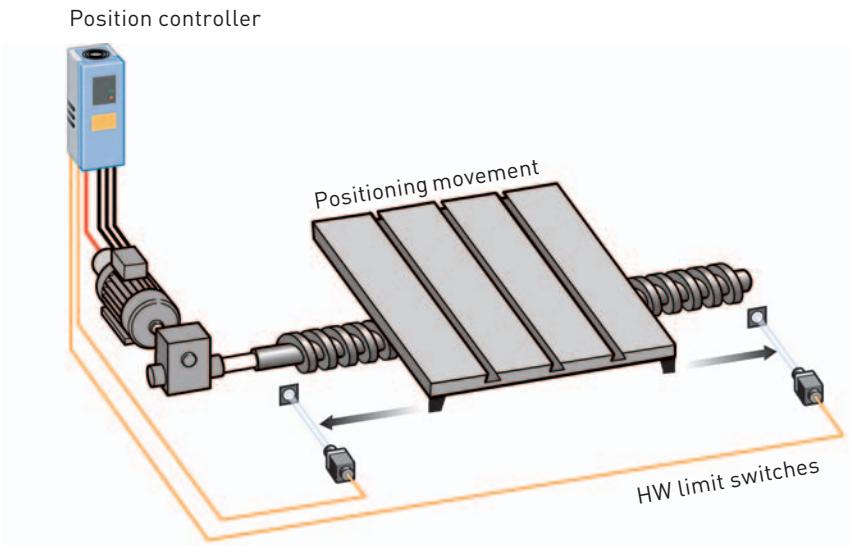

# NXP APPLICATION PACKAGE

## POSITION CONTROL APPLICATION

The Position Control Application offers an integrated single-axis interpolating positioning controller for the Vacon NXP. By the use of the application the Vacon NXP can control machine movement to run a certain distance in linear movements or to run a certain angle in rotary axis applications.

### Features

- User-specified units for positions
- Alternative zero calibration cycles
- Home position
- Absolute and relative positioning
- Sequencing
- Hardware or software based end limits
- I/O or fieldbus control

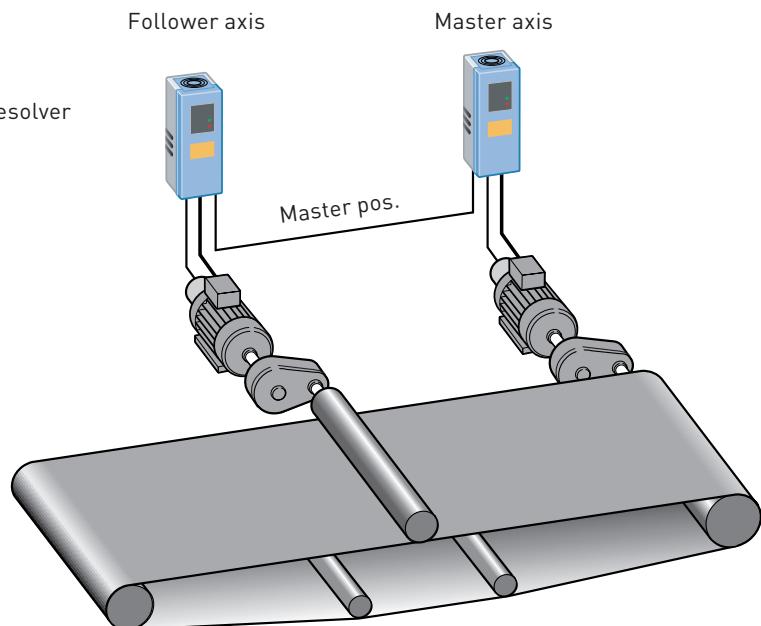

## SHAFT SYNCHRONIZATION APPLICATION

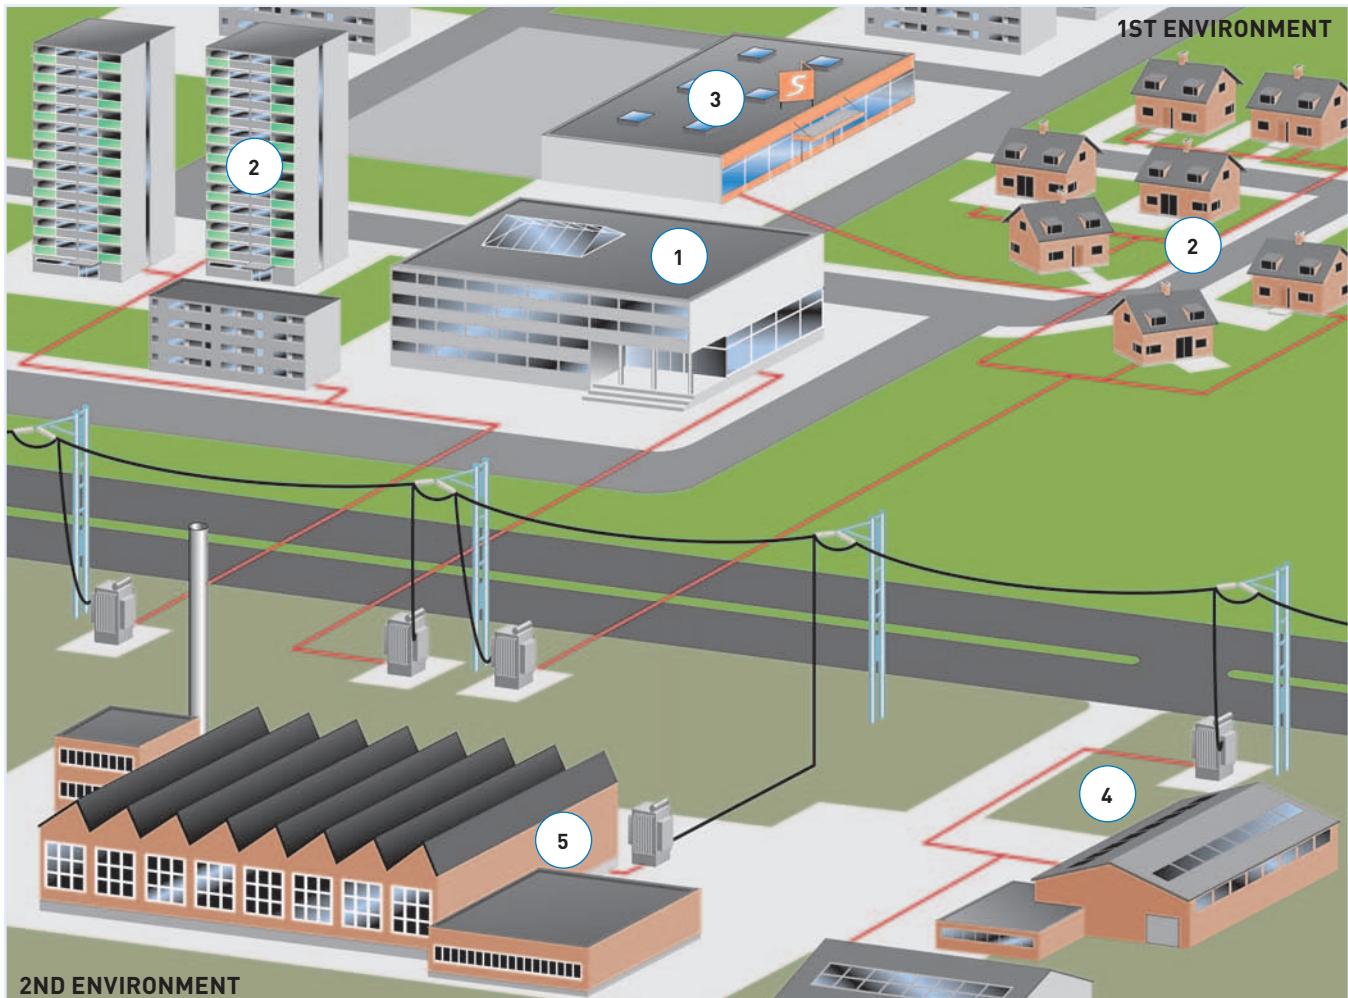

The Shaft Synchronization Application controls the position or the angle of the follower axis directly or in an adjustable proportion to the master axis. The shaft synchronization can be used to replace mechanical shafts in everything from conveyors to processing machines.

### Features

- Master position from secondary encoder input
- Follower position from incremental encoder or resolver
- Adjustable gear ratio
- Trim +/- inputs for ratio change during run
- I/O or fieldbus control

## EMC AND INSTALLATION ENVIRONMENT

The product family standard EN61800-3 sets limits for both emissions and immunity of radio frequency disturbances. The environment has been divided into the 1st and 2nd environments, i.e. in practice, the public and industrial networks, respectively.

Radio Frequency Interference (RFI) filters are typically required to meet the EN61800-3 standard. These filters are integrated in the Vacon NXP as standard.

The 208–240 V and 380–500 V ranges of the Vacon NXP fulfill all the requirements of the 1st and 2nd environments (H level:

EN61800-3, 1st and 2nd environment, restricted distribution). No additional RFI filters or cabinets are required. The 525–690 V range of the Vacon NXP fulfills the requirements of the 2nd environment (L level: EN61800-3, 2nd environment).

The units in the frame sizes of FR4, FR5 and FR6 (the voltage range from 380 to 500 V) are also available with extremely low-emission integrated EMC filters (C level: EN61800-3, 1st and 2nd environment, restricted and unrestricted distribution; EN55011 class B). This is sometimes required in very sensitive locations such as hospitals.

### EMC Selection Table, restricted distribution

VACON NXP EMC	Hospital	Residential Area	Commercial	Light Industry Area	Heavy Industry	Marine
C	0					
H	R	R	R	0	0	
L				R	R	
T					R (IT Network)	R (IT Network)

R = Required ; 0 = Optional

## TECHNICAL DATA

<b>Mains connection</b>	Input voltage $U_{in}$	208...240 V; 380...500 V; 525...690 V; -10%...+10%
	Input frequency	45...66 Hz
	Connection to mains	Once per minute or less (normal case)
<b>Motor connection</b>	Output voltage	0— $U_{in}$
	Continuous output current	High overloadability: $I_H$ , ambient temperature max. +50°C (FR10 and up + 40°C) Low overloadability: $I_L$ , ambient temperature max. +40°C
	Overloadability	High: $1.5 \times I_H$ (1 min/10 min), Low: $1.1 \times I_L$ (1 min/10 min)
	Max. starting current	$I_s$ for 2 s every 20 s
	Output frequency	0...320 Hz; up to 7200 Hz with special software
<b>Control characteristics</b>	Control performance	Open loop vector control (5-150% of base speed): speed control 0.5%, dynamic 0.3%sec, torque lin. <2%, torque rise time ~5 ms Closed loop vector control (entire speed range): speed control 0.01%, dynamic 0.2%sec, torque lin. <2%, torque rise time ~2 ms
	Switching frequency	NX_2/ Up to and including NX_0061: NX_5: 1...16 kHz; Factory default 10 kHz From NX_0072: 1...10 kHz; Factory default 3.6 kHz NX_6: 1...6 kHz; Factory default 1.5 kHz
	Field weakening point	8...320 Hz
	Acceleration time	0...3000 sec
	Deceleration time	0...3000 sec
	Braking	DC brake: 30% * $T_N$ (without brake resistor), flux braking
	Ambient operating temperature	-10°C (no frost)...+50°C: $I_H$ (FR10 and up + 40°C) -10°C (no frost)...+40°C: $I_L$
<b>Ambient conditions</b>	Storage temperature	-40°C...+70°C
	Relative humidity	0 to 95% RH, non-condensing, non-corrosive, no dripping water
	Air quality: - chemical vapours - mechanical particles	IEC 721-3-3, unit in operation, class 3C2 IEC 721-3-3, unit in operation, class 3S2
	Altitude	100% load capacity (no derating) up to 1000 m 1% derating for each 100 m above 1000 m; max. 3000 m
	Vibration EN50178/EN60068-2-6	5...150 Hz: Displacement amplitude 1 mm (peak) at 5...15.8 Hz (FR10 and up: 0.25 mm (peak) at 5...31 Hz) Max acceleration amplitude 1 G at 15.8...150 Hz (FR10 and up: 1 G at 31...150 Hz)
	Shock EN50178, EN60068-2-27	UPS Drop Test (for applicable UPS weights) Storage and shipping: max 15 G, 11 ms (in package)
	EMC	Fulfil all EMC immunity requirements
<b>Safety</b>	Immunity	
	Emissions	<b>EMC level H:</b> EN 61800-3 (1996)+A11 (2000) (1st environment, restricted use); EN 61000-6-4, EN50081-2; EN55011 class A. <b>EMC level C:</b> EN 61800-3 (1996)+A11 (2000) (1st environment, unrestricted use); EN 61000-6-3, EN50081-1,-2; EN55011 class B. <b>EMC level L:</b> EN 61800-3 (1996)+A11 (2000) (2nd environment). <b>EMC level T:</b> Low earth-current solution suitable for IT networks (can be modified from H-level units)
		EN 50178 (1997), EN 60204-1 (1996), EN 60950 (2000, 3rd edition) (as relevant), IEC 61800-5, CE, UL, CUL; (see unit nameplate for more detailed approvals)
<b>Control connections (OPT-A1, -A2 or OPT-A1, -A3)</b>	Analogue input voltage	0...+10 V (-10 V...+10 V joystick control), $R_i = 200 \text{ k}\Omega$ , resolution 0.1%, accuracy $\pm 1\%$
	Analogue input current	0(4)...20 mA, $R_i = 250 \Omega$ differential, resolution 0.1%, accuracy $\pm 1\%$
	Digital inputs	6, positive or negative logic; 18...30 VDC
	Auxiliary voltage	+24 V, $\pm 15\%$ , max. 250 mA
	Output reference voltage	+10 V, $\pm 3\%$ , max. load 10 mA
	Analogue output	0(4)...20 mA; $R_L$ max. 500 $\Omega$ , resolution 10 bit, accuracy $\pm 2\%$
	Digital output	Open collector output, 50 mA/48 V
	Relay outputs	2 programmable change-over (NO/NC) relay outputs (OPT-A3: NO/NC+NO) Switching capacity: 24 VDC/8 A, 250 VAC/8 A, 125 VDC/0.4 A. Min. switching load: 5 V/10 mA
	Thermistor input (OPT-A3)	Galvanically isolated, $R_{trip} = 4.7 \text{ k}\Omega$
<b>Protections</b>		Overvoltage, undervoltage, earth fault, mains supervision, motor phase supervision, overcurrent, unit overtemperature, motor overload, motor stall, motor underload, short-circuit of +24 V and +10 V reference voltages
